Latest News:

Nov 30 **SAP Business One will no longer give any support statements on virtualization software.**
Effectively immediately, SAP Business One will no longer provide any support statements on virtualization software as we consider it the virtualization vendor's responsibility to ensure operating system compatibility. SAP Business One is running on virtualization software just as it is running on non-virtualized operating system platforms.

- In general, only the **English** platform versions are supported. Platform versions in other languages are supported as long as the issue is **not specific** to the platform version in a particular language.
- SAP will test only major versions of Microsoft's operating systems, databases and Office software products. Service Packs delivered by Microsoft in the course of a product's lifecycle will no longer be tested separately, but will automatically be officially supported for SAP Business One.
- If you encounter an issue with any of the Microsoft product Service Packs, SAP will solve this issue on a case-by-case basis as a bug (historically low rate of occurrence).
- For inquiries concerning supported platforms, open a ticket under component **SBO-CRO-PLT** via the [SAP Business One Product Support](#) page.

Note that the **minimum** hardware requirements outlined here are just recommendations to support operational processes at lowest level. For smooth operations, any given installation should ideally have a hardware configuration that is standard to the market.

- Minimum Hardware Requirements for Non-hosted Environments
- Minimum Hardware Requirements for the integration component 1.0 for SAP Business One 8.8
- RAM Requirements for SAP Add-Ons
- Hardware Requirements for Hosted Environments
- Additional System Requirements

Memory ⁽¹⁾	Database system 2 GB
	Operating system 1 GB
	integration component 1 GB ⁽²⁾

⁽¹⁾ Using a 32-bit operating system, a maximum of 1 GB memory can be assigned to the integration component for SAP Business One. For higher performance requirements usage, a 64-bit operating system is recommended, allowing to use more than 1 GB memory.

⁽²⁾ When using a 64-bit operating system, the default value for the integration component for SAP Business One is set to 2 GB.

Add-On	8.8 / 8.81 / 8.82	9.0

⁽²⁾ With Release 8.8, SAP Crystal Solutions have been introduced as the standard reporting and printing platform for SAP Business One.

RAM Requirements

Citrix XenApp Edition or Windows Terminal Services hardware requirements, as stipulated by the manufacturer.

For WAN connections, it is recommended to use the Remote Desktop Protocol (RDP).

Per user:

- SAP Business One application – 256 MB ~ 512 MB
- Citrix Client Session – For recommended requirements, refer to Citrix documentation
- Each DI API Add-On using Multiple Add-On Mechanism adds a minimum of 25 MB (first launched Add-On adds a minimum of 60 MB). For recommended requirements, contact your solution provider.

Example:

Your system is required to run:

- 4 SAP Add-Ons
- 1 Solution Add-On
- 10 SAP Business One users

Calculate the required memory as follows:

- All Add-Ons require 60 MB x 1 SAP Add-On + 25 MB x 3 SAP Add-Ons + 60 MB x 1 Solution Add-On = **200 MB ~ 300 MB** for all five Add-Ons
- Each user requires 60 MB ~ 80 MB (application) + 200 MB ~ 300 MB (Add-Ons) + 40 MB ~ 50 MB (Citrix session) = 300 MB ~ 430 MB x 10 users = **3 GB – 4 GB** in total

Software Requirements Server

Microsoft® Internet Explorer 8.0 or higher

Microsoft® Data Access Components 2.6 (MDAC) or higher

Software Requirements Client

Microsoft® Internet Explorer 8.0 or higher

Microsoft® Data Access Components 2.6 (MDAC) or higher

Note: To send faxes from SAP Business One, it is recommended to install Microsoft® Fax Services. Symantec WinFax Pro 10.0 is no longer supported by Symantec, but may be used with SAP Business One if it is already installed.
